# ABSTRACT OF THE DISCLOSURE

A computer network system has a document data storage system for storing an electronic document having therein a signature image in association with a signer ID number, and an attest data storage system for storing an attest data including a registered signature image data. The document data storage system receives the registered signature image data based on the signer ID number from the attest data storage system, and stores the registered imaged data in association with the electronic document. Examination of the signature can be easily conducted for attesting the electronic document.
